

## eHandS is the most efficient way to manage your Health and Safety!

### Benefits

eHandS is a Health and Safety management package that allows you to use your computer system to;

- ✓ Communicate your policies and procedures to all your staff easily and effectively
- ✓ Manage ALL your health and safety records in the one place
- ✓ Track actions and measure progress on critical health and safety actions
- ✓ Demonstrate compliance

This is achieved through an easy to use interface which can be accessed from any PC in your organisation with Internet Explorer and access to your server.

The system is easily configured to meet your own specific needs. Your own policies and procedures can be quickly and easily copied into the system and instantly made available to all your staff.

The system can be easily configured with your own drop down lists of departments, risk ratings, incident classifications etc.

Actions can be assigned to individuals from various areas of the system. The system then emails the individual to inform them of the action.

### Features

eHandS is designed to allow you to manage all your health and safety obligations in the one place. The features included in eHandS are;

- ✓ Policies & Procedures
- ✓ Risk Assessments
- ✓ COSHH Assessments
- ✓ Incident Reporting
- ✓ First Aid Reporting
- ✓ Accident Investigation
- ✓ Safety Inspections
- ✓ Permit to Work
- ✓ Display Screen Equipment
- ✓ Asbestos Register
- ✓ Forklift Truck Inspections
- ✓ Training Records
- ✓ Action Tracking

eHandS comes complete with all functions, allowing the client to “switch off” the functions they do not need or have yet to grow into.

### Technical Requirements

eHandS uses the latest web technology from Microsoft to provide a system that either be installed on your own server and accessed over your intranet or installed on a remote server and accessed over the internet.

All data can either be stored in an existing SQL Server database or the system can be installed with its own MSDE database.
